## **REPORT SUBJECT**

ALX Classic Aluminum Railing System

## **1.0 SCOPE OF EVALUATION**

This research report addresses compliance with the following Codes:

- 2012 International Building Code (IBC)
- 2012 International Residential Code (IRC)

The *ALX Classic* Aluminum Railing System has been evaluated for the following properties:

• Structural Performance

#### 2.0 USES

**2.1.** The *ALX Classic* Aluminum Railing System is guards or guardrails under the definitions of the referenced codes. It is intended for use at or near the open sides of elevated walking areas of buildings and walkways as required by the codes.

#### **3.0 DESCRIPTION**

**3.1.** Level guards are provided with rail lengths up to 96 inches in length (measured between the inside of support posts) and an installed height of up to 42 inches measured from the top of the upper rail to the walking surface. See Table 1 and Table 2 for qualified lengths and configurations.

**3.2.** Stair guardrails are provided with rail lengths up to 94 inches measured along the sloping length between the inside of supports with an installed height of up to 46 inches measured vertically from the top of the upper rail to the leading edge of the stair tread or

landing. See Table 1 and Table 2 qualified lengths and configurations.

**3.3.** *The ALX Classic* guardrail system is an assemblage of an aluminum upper and lower rail, aluminum vertical balusters, glass balusters and aluminum posts. The system has plastic baluster to rail connectors, rail to post brackets and caps, 2.5 inch x 2.5 inch. aluminum post mounts, a supporting foot piece, decorative moldings and post caps. Foot blocks are the Classic Baluster cut to size.

**3.3.1.** The *ALX Classic* top rail and bottom rails are identical extruded 6063-T6 aluminum components of contoured cross sectional shape. *ALX Classic* rails are available in both heavy and light thicknesses. See Table 1, Table 2 and Figure 1.

**3.3.2.** The infill area may be configured in multiple ways using the following 6063-T6 aluminum balusters and tempered glass balusters. See Table 1 and Table 2 for qualified assemblies and Figure 2.

**3.3.3.** Balusters are connected to rails with a variety of baluster connectors. See Table 1, Table 2, Table 3 and Figure 3.

**3.4.** "The ALX Classic posts are extruded 6005-T5 aluminum available in 0.080 inch (Light) and 0.15 inch wall thickness. See Table 1 and Table 2 and Figure 5 for qualified assemblies.

**3.5.** The system is available in satin black, matte black, and white.

#### 4.0 PERFORMANCE CHARACTERISTICS

**4.1.** The guardrail system described in this report has demonstrated the capacity to resist the design loadings specified in Chapter 16 of the IBC and Section R301 of the IRC when tested in accordance with ICC-ES AC273.

#### **5.0 INSTALLATION**

The *ALX Classic* Aluminum Railing System must be installed in accordance with the manufacturer's published installation instructions, the applicable Code and this Research Report. The manufacturer's

published installation instructions and this Research Report must be strictly adhered to, and a copy of the instructions must be available on the jobsite during installation.

**5.1.** Guards may be assembled in various configurations identified in Table 1 and Table 2. See Table 3 for the fastening schedule of all system components.

**5.2.** Rails may be installed at angles of 67.5° and 45° to the post face using angled adaptors. See Table 1 and Table 2 for qualified assemblies and Figure 3. Bottom rails attach to aluminum posts. See Table 1 and Table 2 for recognized configurations.

**5.3.** Structural performance of anchorage of support posts to structure are to be evaluated separately from this report.

#### 6.0 SUPPORTING EVIDENCE

**6.1.** Drawings and installation instructions submitted by the manufacturer.

**6.2.** Reports of testing and engineering analysis demonstrating compliance with the performance requirements of ICC-ES Acceptance Criteria for Handrails and Guards, AC273 revised February 2014.

**6.3.** The reports of testing demonstrating compliance with the performance requirements of ANSI Z97.1-2009, American National Standard for Safety Glazing Materials Used in Buildings, as required by Section 2406 of the IBC and Section R308 of the IRC.

**6.4.** Sealed engineering calculations and drawings in accordance with provisions of the 2010 Aluminum Design Manual (ADM1-2010).

**6.5.** Documentation of an Intertek approved quality control system for the manufacturing of products recognized in this report.

#### 7.0 CONDITION OF USE

The *ALX Classic* Guardrail System described in this Research Report complies with, or is a suitable alternative to, what is specified in those Codes listed in Sections 1.0 and 2.0 of this report, subject to the following conditions:

**7.1.** Installation must comply with this Research Report, the manufacturer's published installation instructions and the applicable Code. In the event of a

conflict between the manufacturer's instructions and this report, this report governs.

**7.2.** Only those types of fasteners and fastening methods described in this report have been evaluated for the installation of the *ALX Classic* Guardrail System. Other methods of attachment are outside the scope of this report.

**7.3.** Anchorage of the structural post is not within the scope of this report and is subject to evaluation and approval by the building official. Anchors must satisfy the design load requirements specified in Chapter 16 of the building code and must meet the following minimum requirements:

**7.3.1.** A minimum of four anchor bolts must be used and located in the four pre-drilled holes in the structural post base plate.

**7.3.2.** The anchors must have a minimum nominal diameter equal to 3/8 inch.

**7.3.3.** When the supporting structure is a wood-framed deck, installation must include anchorage to suitable structural framing. Decking is not considered structural framing, and anchorage to decking alone is not an approved installation method.

**7.3.4.** Where required by the building official, engineering calculations and details shall be provided. The calculations shall verify that the anchorage and supporting structure complies with the building code for the type and condition of the supporting construction.

**7.4.** The glass infill panel of guardrails is considered a hazardous location as defined by section 2406.4 of the IBC. Glass must be identified by permanent etching as required by Section 2406.3 of the IBC. Each section of glass must bear the manufacturer's name or mark and the applicable test standard (Class A of ANSI Z97.1-2009)

**7.5.** Guardrails using glass infill are not approved for use in wind-borne debris regions as defined by the IBC in accordance with Section 2407.1.4

**7.6.** Maine Ornamental LLC is located in Greene, ME and operates in accordance with an approved quality control system that includes independent third party inspections by Intertek – ATI (IAS AA-676).

# 8.0 IDENTIFICATION

The *ALX Classic* Aluminum Railing System described in this Research Report are identified by a marking bearing the report holder's name Maine Ornamental, the Intertek Mark, the Code Compliance Research Report number (CCRR-0243) and the following statement: "See CCRR-0243 at <u>https://whdirectory.intertek.com</u> for uses and performance levels."

## 9.0 CODE COMPLIANCE RESEARCH REPORT

**9.1.** Approval of building products and/or materials can only be granted by a building official having legal authority in the specific jurisdiction where approval is sought.

**9.2.** Code Compliance Research Reports shall not be used in any manner that implies an endorsement of the product by Intertek-ATI.

**9.3.** Reference to the Intertek website address: <u>whdirectory.intertek.com</u> is recommended to ascertain the current version and status of this report.

This Code Compliance Research Report ("Report") is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this Report. Only the Client is authorized to permit copying or distribution of this Report and then only in its entirety, and the Client shall not use the Report in a misleading manner. Client further agrees and understands that reliance upon the Report is limited to the representations made therein. The Report is not an endorsement or recommendation for use of the subject and/or product described herein. This Report is not the Intertek Listing Report covering the subject product and utilized for Intertek Certification and this Report does not represent authorization for the use of any Intertek be approved in writing by Intertek.
