REPORT SUBJECT:  
TimberTech® Decking Planks  
(Wood-Plastic Composite Deck Boards)  
DockSider™ Plank  
Legacy Solid Plank  
Legacy Grooved Plank  
ReliaBoard Plank  
Terrain Solid Plank  
Terrain Grooved Plank  
Tropical Solid Plank  
Tropical Grooved Plank  
TwinFinish™ Solid Plank  
TwinFinish™ Grooved Plank

1.0 SCOPE OF EVALUATION

1.1. This Research Report addresses compliance with the following Codes:  
• 2015 and 2012 International Building Code® (IBC)  
• 2015 and 2012 International Residential Code® (IRC)

1.2. TimberTech® Decking Planks have been evaluated for the following properties:  
• Structural Performance  
• Durability  
• Surface Burning  
• Decay Resistance  
• Termite Resistance

1.3. TimberTech® Decking Planks are intended for use as a walking surface on exterior decks, balconies, porches, and walkways, including stairs in the following construction types:  
• Type IIB, IIIB & VB  
• TYPE IIIA, IV and VA where sprinkler protection is provided (IBC Section 1406.3 Exception 3)

2.0 STATEMENT OF COMPLIANCE

TimberTech® Decking Planks comply with the Codes listed in Section 1.1, for the properties stated in Section 1.2 and uses stated in Section 1.3, when installed as described in this report, including the Conditions of Use stated in Section 6.

3.0 DESCRIPTION

3.1. Materials and Processes – DockSider™, ReliaBoard, and TwinFinish™ Planks are composed of a solid, co-extruded, fully capped, wood-plastic composite (WPC) core with a WPC cap. Legacy, Terrain, and Tropical are composed of a solid, co-extruded, fully-capped, wood-plastic composite (WPC) core with a polymer cap.

3.2. Profiles – TimberTech® Decking Planks have a solid cross-section, solid cross-section with grooves, and contoured cross-section profiles. See Table 2 for product descriptions and Figures 1 through 6.

3.3. Walking Surface – The TimberTech® Decking Planks are finished with a textured, embossed wood pattern.

4.0 PERFORMANCE CHARACTERISTICS

4.1. Uniform Live Load ratings are given in Table 1 for the corresponding deck boards and fasteners indicated.

4.2. Deck boards used as stair treads are rated for the code-prescribed concentrated load equal to 300 lb. when installed with a maximum span indicated in Table 2. Deck boards used as stair treads shall be installed in a minimum two-span condition.
4.3. Wind Uplift Resistance ratings are given in Table 1 for the corresponding deck boards and fasteners indicated.

4.4. Materials used in the TimberTech Decking Planks have a flame spread index not greater than 200, when tested in accordance with ASTM E84, as required by ICC-ES AC174.

4.5. Materials used are deemed equivalent to preservative treated or naturally durable wood for resistance to weathering effects, attack from Formosan termites and fungus decay.

4.6. Structural performance has been demonstrated for a temperature range from -20°F (-29°C) to 125°F (52°C).

5.0 INSTALLATION

Installation shall be in accordance with the manufacturer’s installation instructions and this report. Where differences occur between this report and the manufacturer’s installation instructions, this report shall govern.

5.1. TimberTech® Decking Planks shall be installed with fastening as indicated in Table 1.

6.0 CONDITIONS OF USE

The TimberTech® Decking Plank applications identified in this report are deemed to comply with the intent of the provisions of the referenced building codes subject to the following conditions.

6.1. The deck boards identified in this report may be used in One- and Two-Family Dwellings regulated by the IRC and other construction types regulated by the IBC in accordance with IBC Section 1406.3 as follows:

Construction Type IIIB, IIIB & VB per IBC Section 1406.3 and Table 601 (No fire resistance rating required for floors)

Construction Type IIIA, IV & VA per IBC Section 1406.3, Exception 3 (Sprinkler protection required)

6.2. Deck boards placed at an angle other than 90 degrees to the supporting joist will require support framing at a reduced spacing such that the span of the deck board does not exceed the span identified in Table 3.

6.3. The wind uplift resistance rating recognized in this report is based on attachment to treated Southern Pine framing (specific gravity, G=0.55). Installation on wood framing with a lesser specific gravity may result in a lower wind uplift rating.

6.4. Where required by the building official, engineering calculations and details shall be provided. The calculations shall verify that the anchorage complies with the building code for the type of framing and condition of the supporting construction.

6.5. Compatibility of the supporting construction materials with all fasteners, metal post mount components and other hardware components is subject to approval by the code official.

6.6. Only those types of fasteners and fastening methods described in this report have been evaluated for the installation of the TimberTech® Decking Planks; other methods of attachment are outside the scope of this report.

6.7. Deck boards recognized in this report have been evaluated for use in areas subject to Formosan termite attack.

6.8. All products recognized by this report are manufactured in Wilmington, Ohio by CPG International, LLC in accordance with the manufacturer’s approved quality control system with inspections by Architectural Testing (IAS AA-676).

7.0 SUPPORTING EVIDENCE

7.1. Manufacturer’s drawings and installation instructions.

7.4. Reports of testing and engineering analysis demonstrating compliance with the performance requirements of ASTM D 7032-10a, Standard Specification for Establishing Performance Ratings for Wood-Plastic Composite Deck Boards and Guardrail Systems (Guards or Handrails).

7.5. Documentation of an Intertek approved quality control system for the manufacturing of products recognized in this report.

8.0 IDENTIFICATION

TimberTech® Decking Planks are produced in accordance with this report shall be identified with labeling on the individual deck boards that includes the following information:

8.1. Name and/or trademark of the manufacturer.

8.3. The Intertek Code Compliance Research Report mark and number (CCRR-0128).

9.0 CODE COMPLIANCE RESEARCH REPORT USE

9.1. Approval of building products and/or materials can only be granted by a building official having legal authority in the specific jurisdiction where approval is sought.

9.2. Code Compliance Research Reports shall not be used in any manner that implies an endorsement of the product by Intertek.

9.3. Reference to the https://bpdirectory.intertek.com is recommended to ascertain the current version and status of this report.

</tbody>
</table>

¹ Span/Load rating is the maximum span in inches and the maximum allowable live load in pounds per square feet (psf).

² Stair tread span is based on a continuous deck board over two or more equal spans (3 supports).

³ Wind uplift resistance is based on two fasteners at each support (wood joist) except Grooved Planks which use one hidden fastener located at each joist. Values have been adjusted for wind load duration and end use. No further adjustments shall be made.

⁴ Grooved Deck Planks are not used as stair treads.

⁵ Mono-Extruded and Co-Extruded values are the same.

⁶ Alternatively, grooved deck boards may be face fastened with the fasteners recognized for the relevant solid deck board.
